

## LOCALION® SMART ROUTES for SAP FSM

Best-in-class route optimization for SAP Field Service Management (FSM), based on LOGIBALL's proven B2B localion® platform service.

- schedule your field service more reliably with the best real-time and predictive traffic information
- increase customer touch time by connecting FSM to the real world out there
- use precise traffic information for individual vehicle types
- maximize effectiveness of your SAP FSM installation by a ready-to-use cloud service
- delight your field force and your customers by next gen smart dynamic routing

### LOCALION® SMART ROUTES for SAP FSM

localion® smart routes is the ready-to-use cloud service for SAP FSM. It is powered by our proven localion® platform which is optimized for high-performance matrix routing incorporating the best predictive and live traffic feeds in the world.

Simply by selecting a different service endpoint in the SAP FSM setup, your routing quality will jump to the next level: Employ time-specific travel times – avoid traffic jams and travel roads in times of low congestion – adapt travel time prognosis and routes to the specifics of your maintenance vehicles.

Simply reduce inefficiencies on the trip and increase valuable customer touch time and service quality.

### OPTIONS

Depending on the domain your service teams are working in you might want to use specific private roads (e.g. backroads, company sites) or individually categorize roads according to your demands or include mobile navigation into your solution. Reach out to us for an individual solution.

In addition to predictive and live traffic you may also want to consider typical parking delays caused by search times and/or walking needs to get to the final destination. Or include severe weather conditions into the scheduling. These and other dynamic features are considered to be included in localion® smart routes for SAP FSM in the near future.

**Depending on the service type there is a potential of up to 30% overall drive time reduction by using traffic info in scheduling tasks.**

### SAP FSM WITH LOCALION® SMART ROUTES

SMART ROUTING ✓	INDIVIDUAL VEHICLE PARAMETERS ✓	PREDICTIVE TRAFFIC INCLUSION ✓	LIVE TRAFFIC INCLUSION ✓	OPTIONS TO INDIVIDUALIZE FURTHER ON REQUEST: parking, severe weather, road network extension, navigation

### LOCALION® PLATFORM

“With our localion® platform we are continuously striving to extend the limits of location planning and route optimization providing best-in-class B2B solutions. The localion® platform is an integral part of the digital core of an enterprise enabling the next level in digital transformation. Our success is based on more than 25 years experience in developing IT solutions for transport and logistics use cases and our long-term partnership with global providers for static and dynamic road and traffic content” says Roger Mueller, CEO LOGIBALL.
